9. Specification of Quality Assurance

1. Purpose

This standard for Quality Assurance should affirm the quality of LCD module products to supply to purchaser by POWERTIP DISPLAY CORPORATION (Supplier).

2. Standard for Quality Test

2.1 Inspection:

Before delivering, the supplier should take the following tests, and affirm the quality of product.

2.2 Electro-Optical Characteristics:

According to the individual specification to test the product.

2.3 Test of Appearance Characteristics:

According to the individual specification to test the product.

2.4 Test of Reliability Characteristics:

According to the definition of reliability on the specification for testing products.

2.5 Delivery Test:

Before delivering, the supplier should take the delivery test.

2.5.1 Test method: According to MIL-STD-105E, General Inspection Level take a single time.

2.5.2 The defects classify of AQL as following:

Major defect: AQL=0.65

Minor defect: AQL=2.5

Total defects: AQL=2.5

3. Nonconforming Analysis & Deal With Manners

3.1 Nonconforming analysis:

3.1.1 Purchaser should supply the detail data of non-conforming sample and the non-suitable state.

3.1.2 After accepting the detail data from purchaser, the analysis of nonconforming should be finished in two weeks.

3.1.3 If supplier can not finish analysis on time, must announce purchaser before two weeks.

3.2 Disposition of nonconforming:

3.2.1 If find any product defect of supplier during assembly time, supplier must change the good product for every defect after recognition.

3.2.2 Both supplier and customer should analyze the reason and discuss the disposition of nonconforming when the reason of nonconforming is not sure.

4. Agreement items

Both sides should discuss together when the following problems happen.

- 4.1 There is any problem of standard of quality assurance, and both sides think that must be modifier.
- 4.2 There is any argument item which does not record in the standard of quality assurance.
- 4.3 Any other special problem.

5. Standard of The Product Appearance Test

5.1 Manner of appearance test:

- 5.1.1 The test must be under 20W x 2 or 40W fluorescent light, and the distance of view must be at 30 cm.
- 5.1.2 When test the model of Tran missive product must add the reflective plate.
- 5.1.3 The test direction is base on about around 45° of vertical line.

5.1.4 Definition of area:

A Area : Viewing area.
