Notes:

- Output load regulation is specified for a load change of 10% to 100%.
- These units should not be operated with a load under 10% of full load. Operation at no-load may cause damage to the unit.
- These converters will operate without external components. However, when measuring output ripple, it is recommended that an external ceramic capacitor be placed from the +Vout pin to the -Vout pin for single output units and from each output to common for dual output units. An input capacitor will enhance stability over temperature and input line variations. Recommended capacitor values are given in the table below. For applications requiring very low output noise levels, a simple LC filter should be effective.

Vin	Input Capacitor	Vout	Output Capacitor	
			Single	Dual
5 VDC	4.7 μ F	5 VDC	10.0 μ F	4.7 μ F
12 VDC	2.2 μ F	9 VDC	4.7 μ F	2.2 μ F
24 VDC	1.0 μ F	12 VDC	2.2 μ F	1.0 μ F
		15 VDC	1.0 μ F	0.47 μ F

- Dual output units may be connected to provide a 10V, 18V, 24V or 30 VDC output. To do this, connect the load across the positive (+Vout) and negative (-Vout) outputs and float the output common.
- It is recommended that a fuse be used on the input of a power supply for protection. See the Model Selection table above for the correct rating.

Pin Connections

Pin	Single	Dual	Pin	Single	Dual
1	+Vin	+Vin	6	No Pin	Common
2	-Vin	-Vin	7	+Vout	+Vout
5	-Vout	-Vout			

Notes:

- All dimensions are typical in inches (mm)
- Tolerance x.xx = ± 0.01 (± 0.25)
- Pin 1 is marked by a "dot" or indentation on the side of the unit
